Req3 plots for comparison

Current shared-realization results: B=2500, sKL grid 20 / 200 / 500, frequency grid 1/1500 / 1/200 / 1/25.

This PDF mirrors the visible presentation plots and includes both clairvoyant regret baselines.

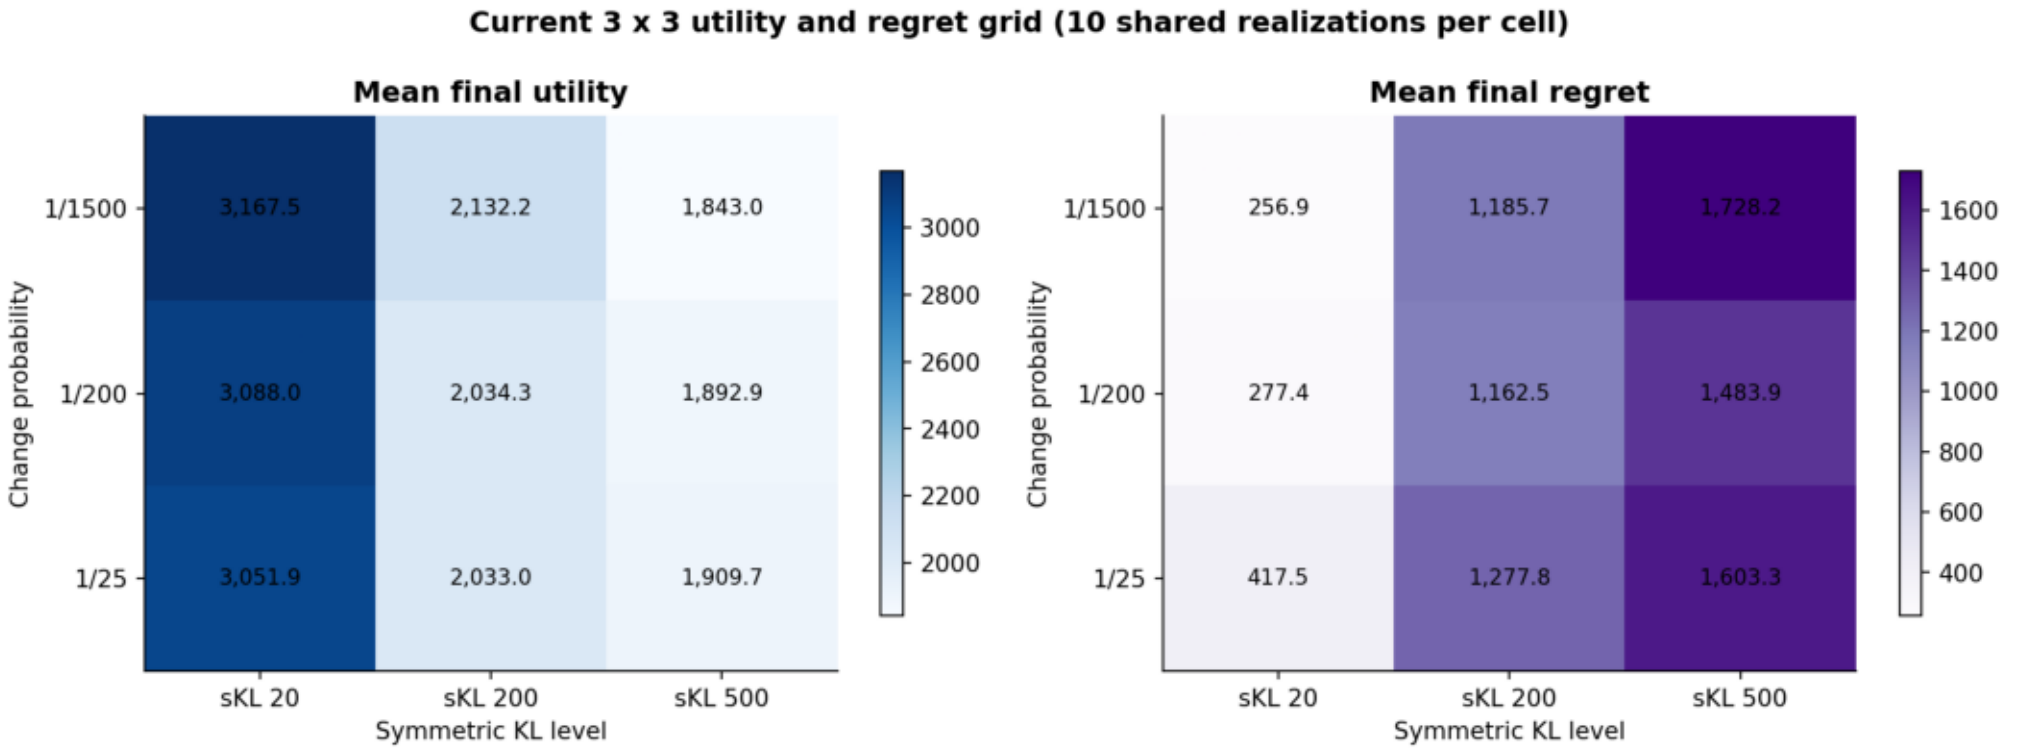

Saved regime schedules

Low frequency now has 2 well-separated change points; medium and high frequencies are shown for context.

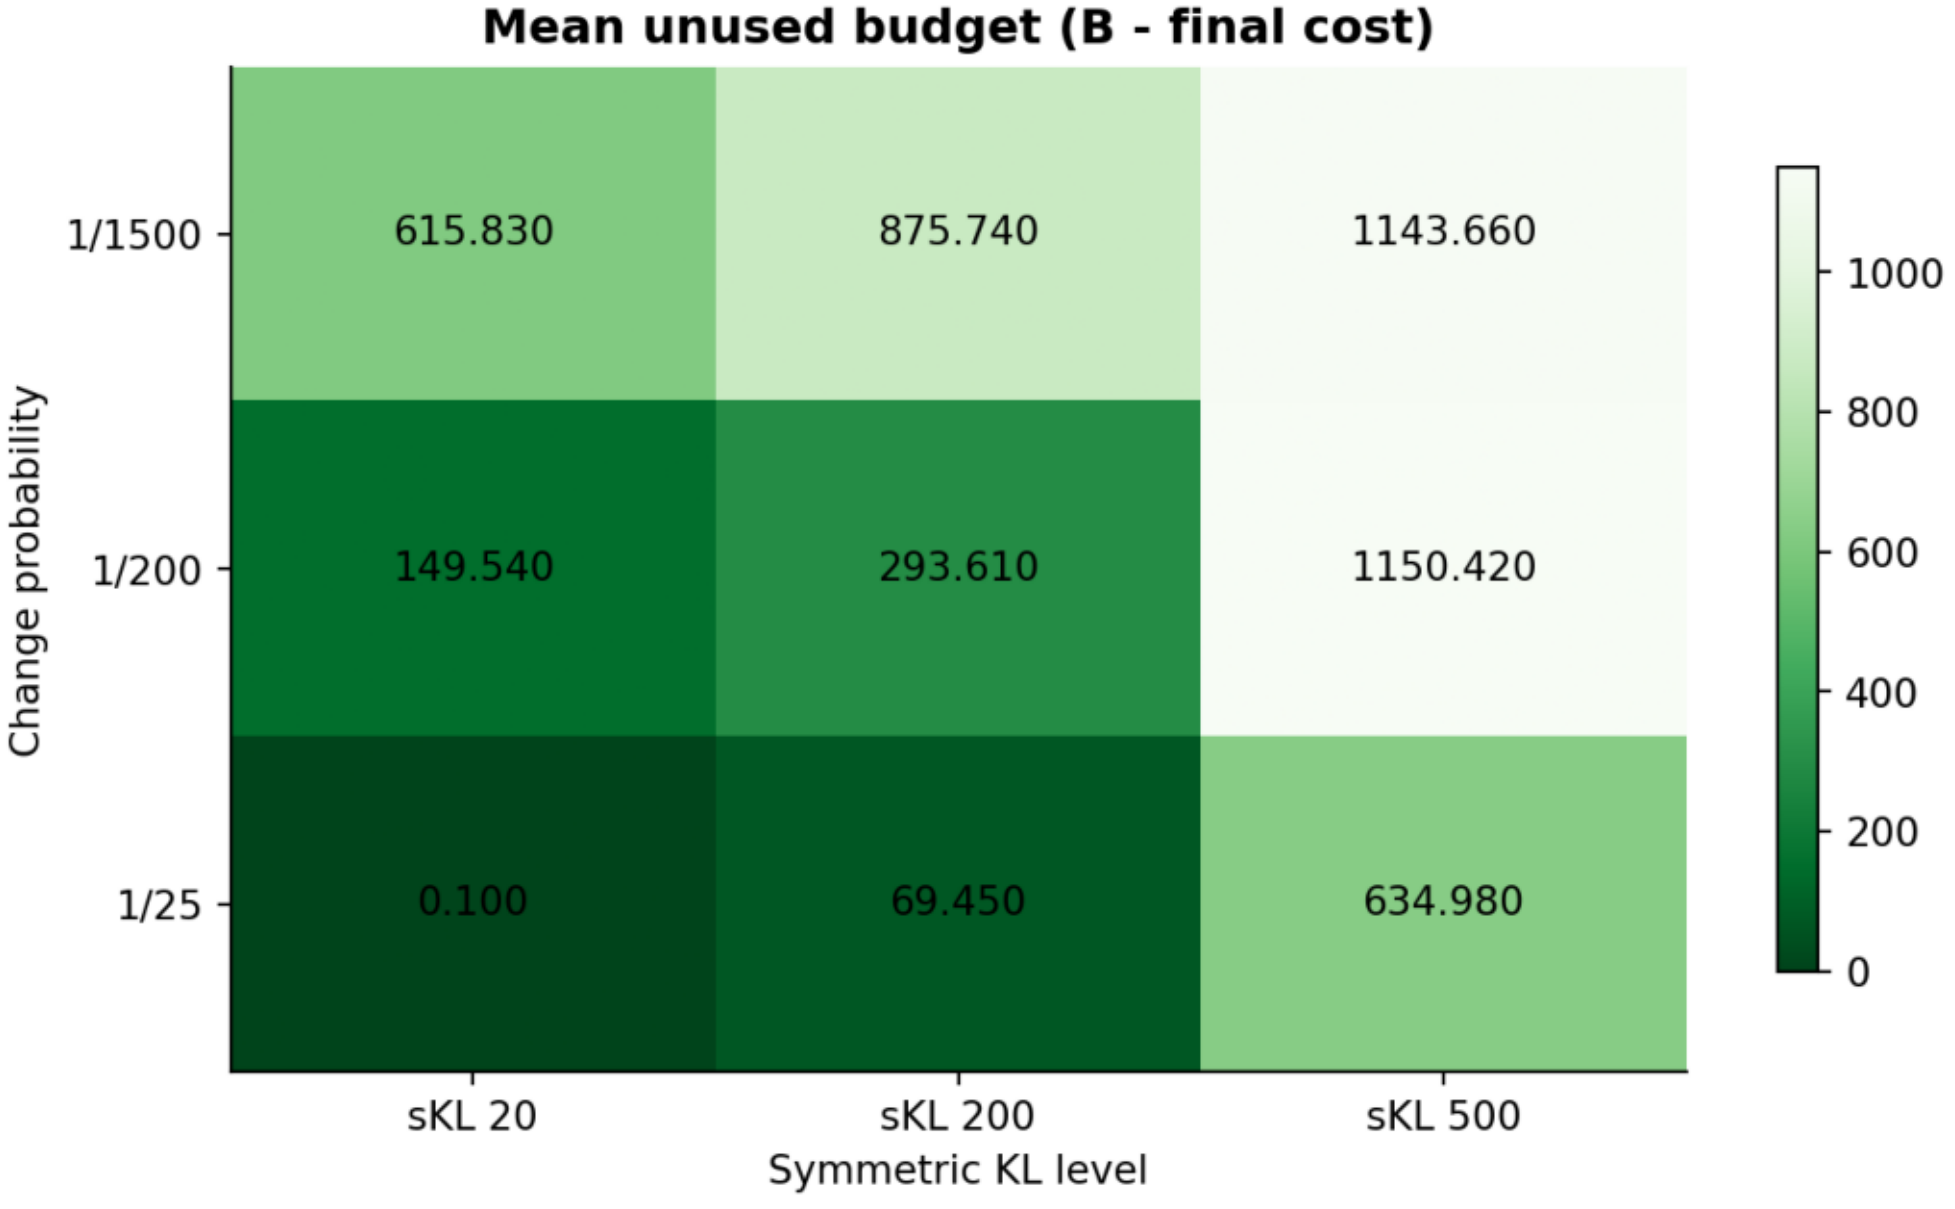

Full-grid utility and regret

Mean final utility and regret over the 3 x 3 grid, using the current shared realizations.

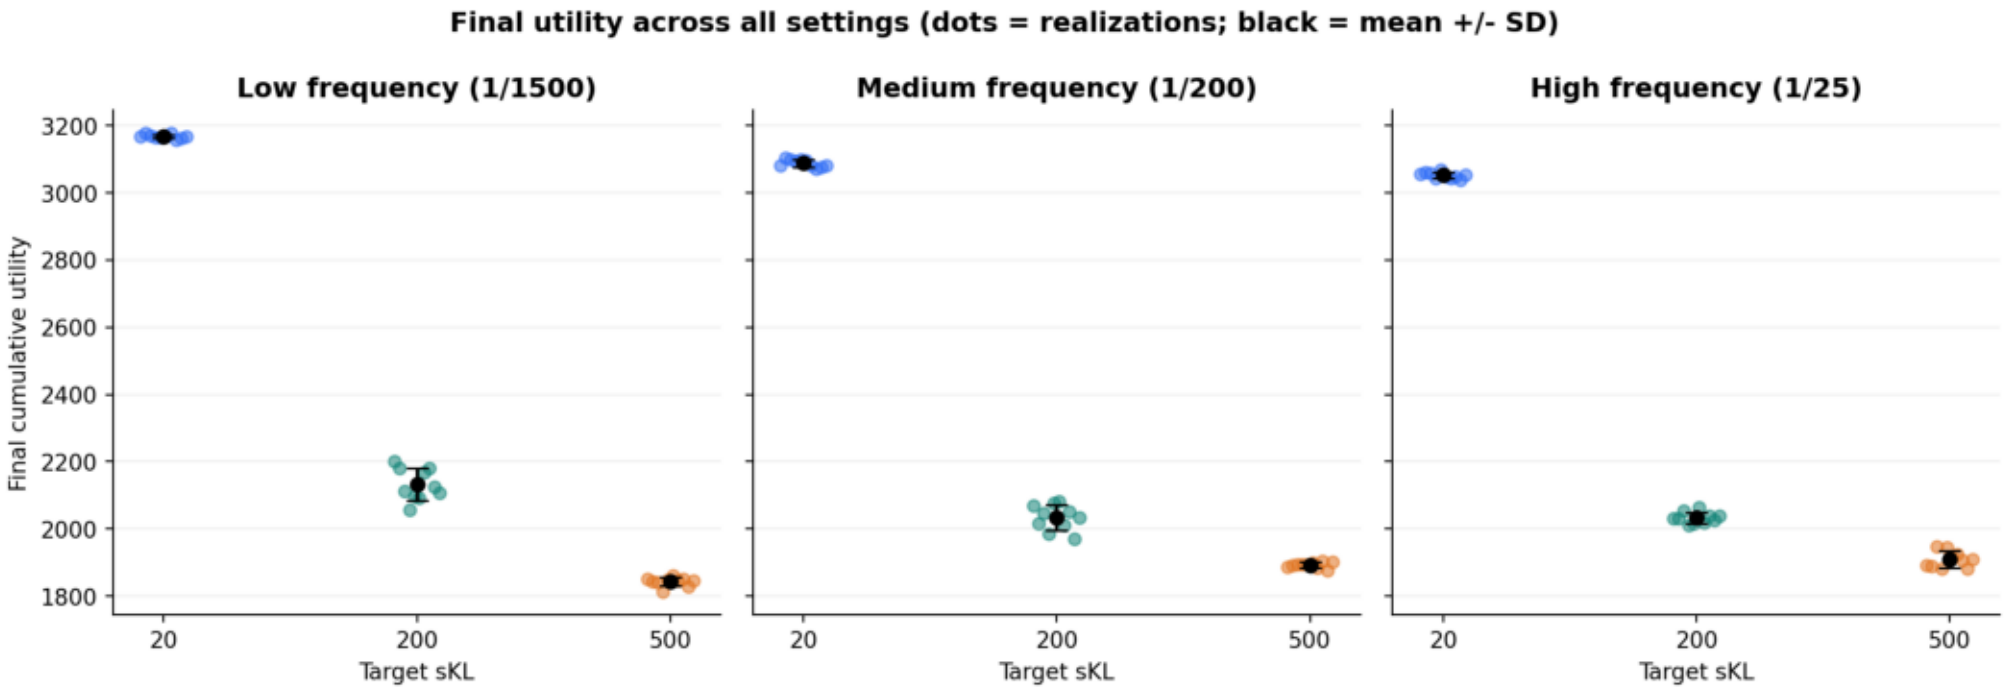

Budget feasibility

Hard filtering keeps cumulative cost within B=2500 for every run.

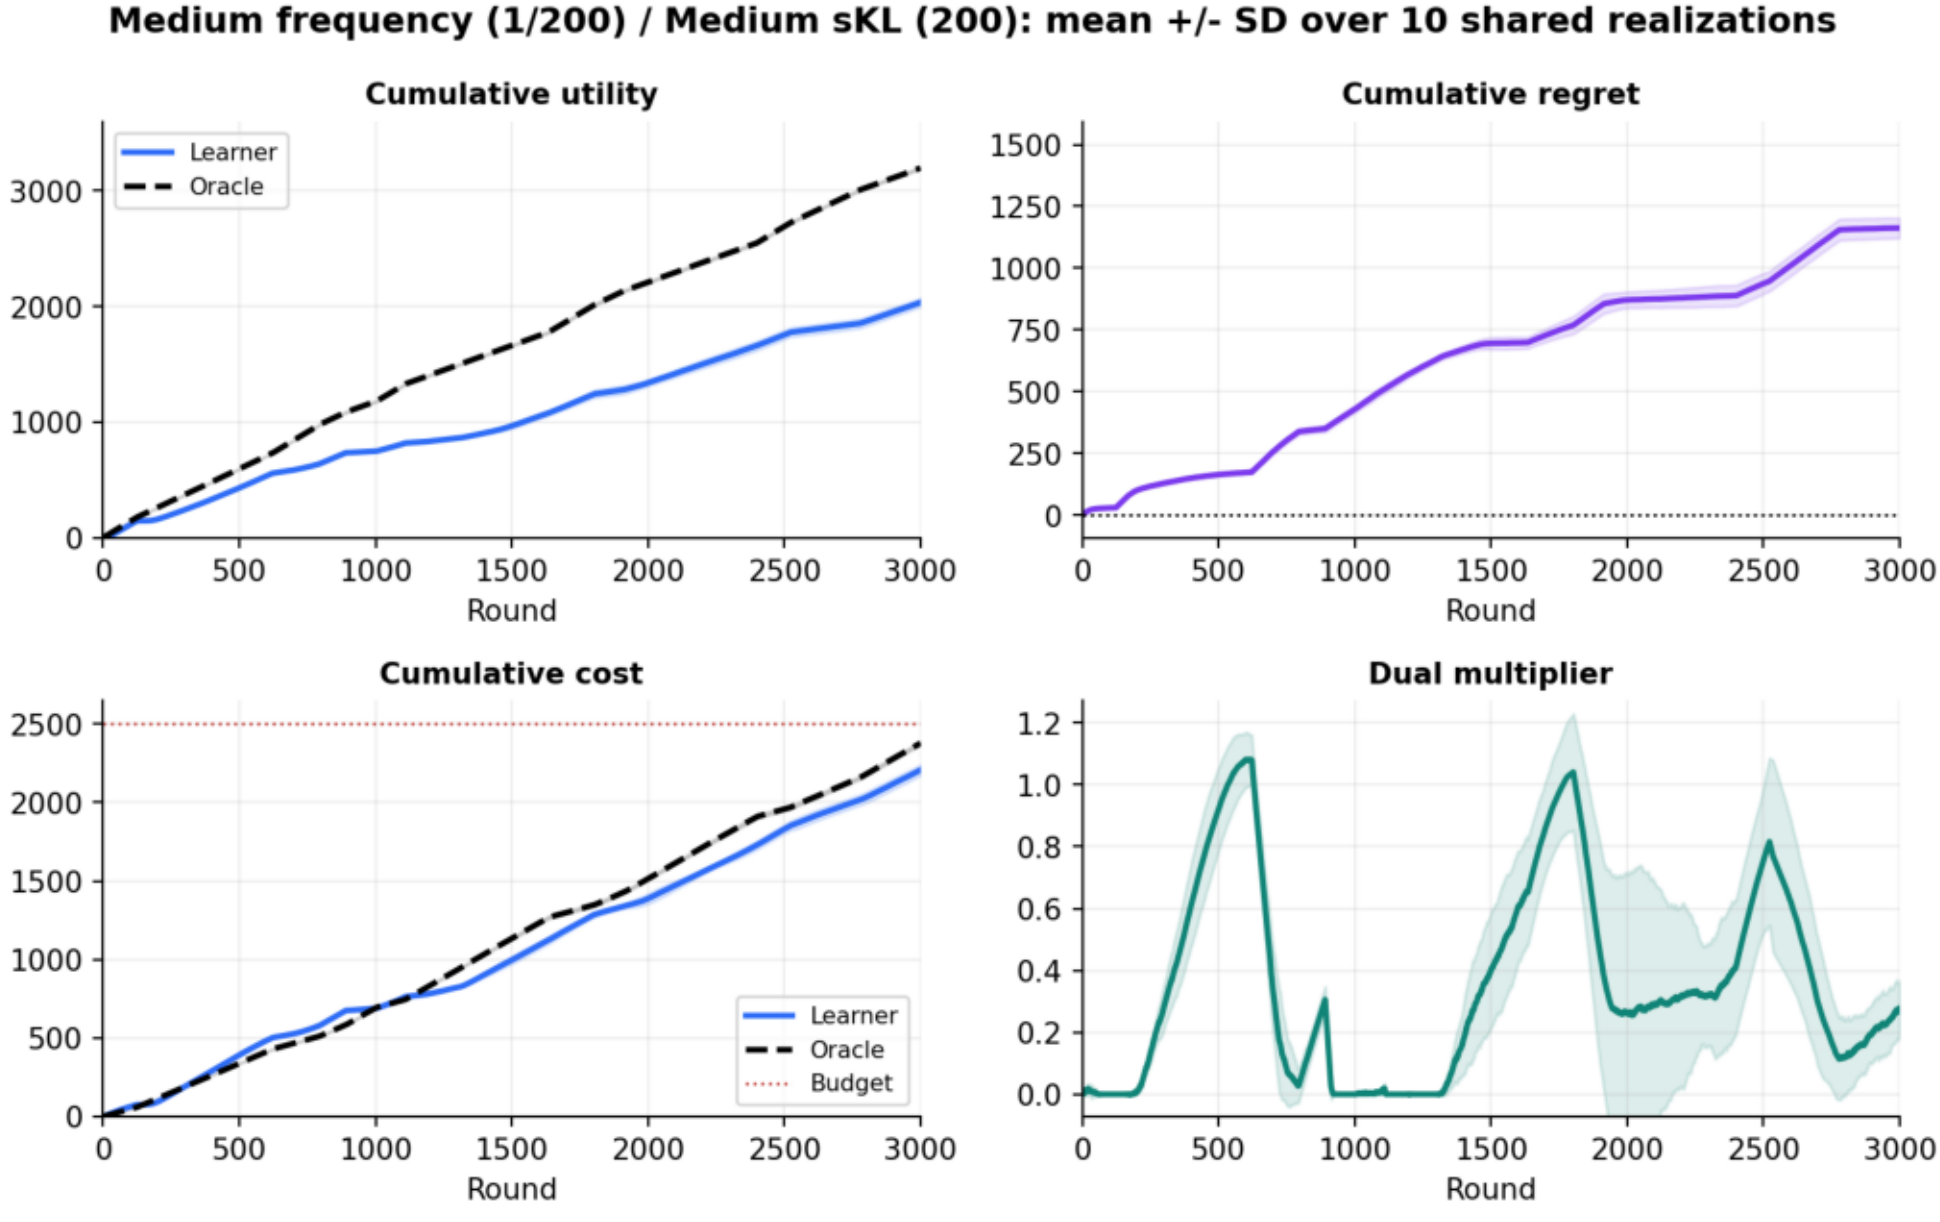

Final utility distribution

Distribution of final learner utility across all settings.

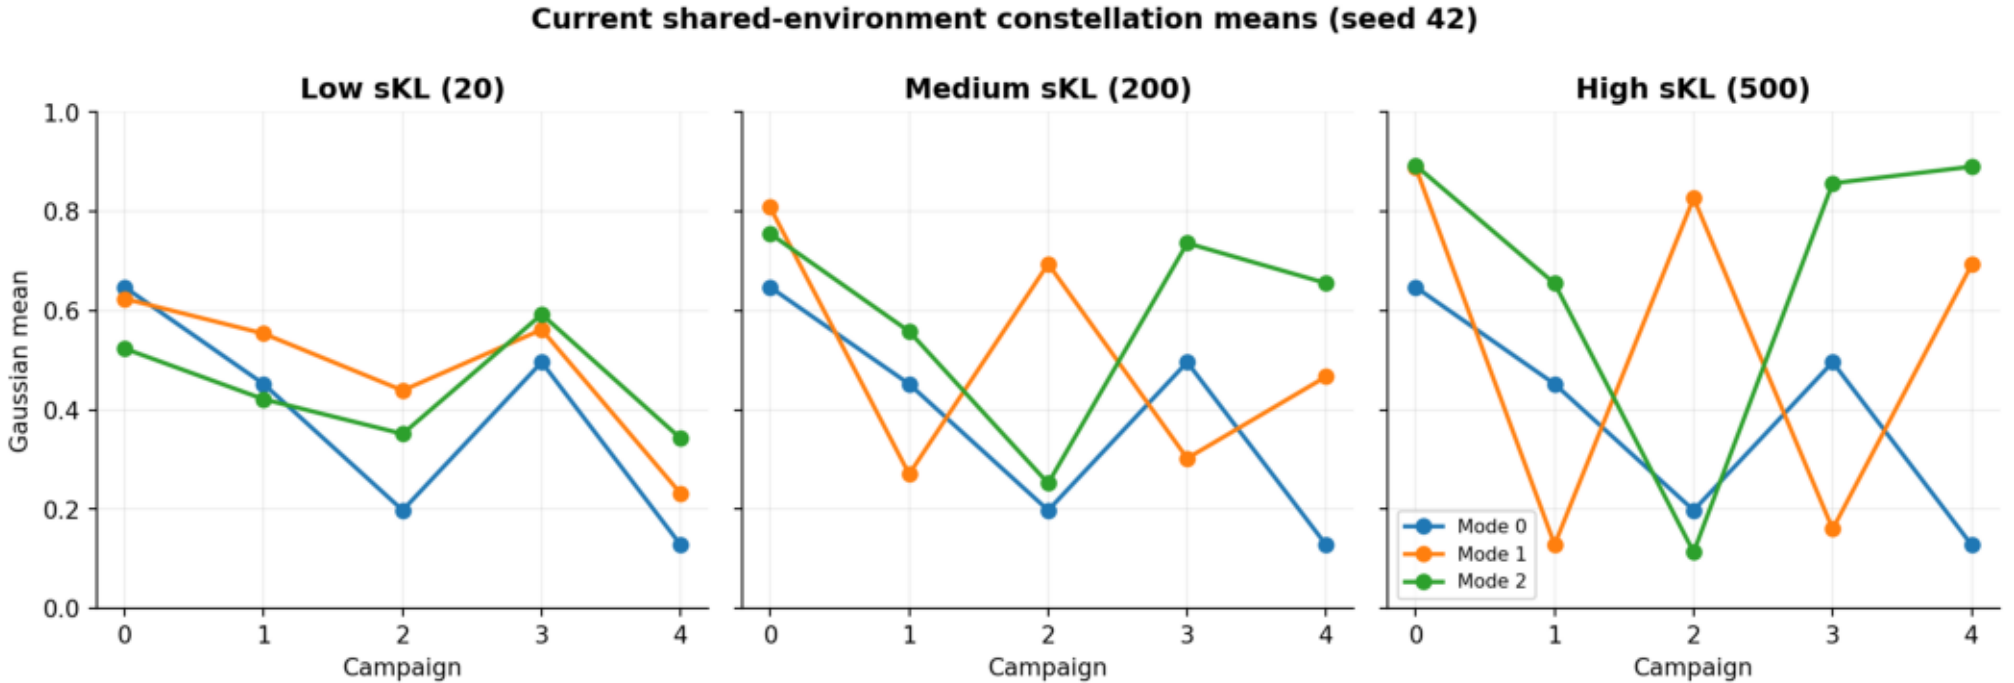

Representative current run dynamics

Medium sKL and medium frequency run dynamics.

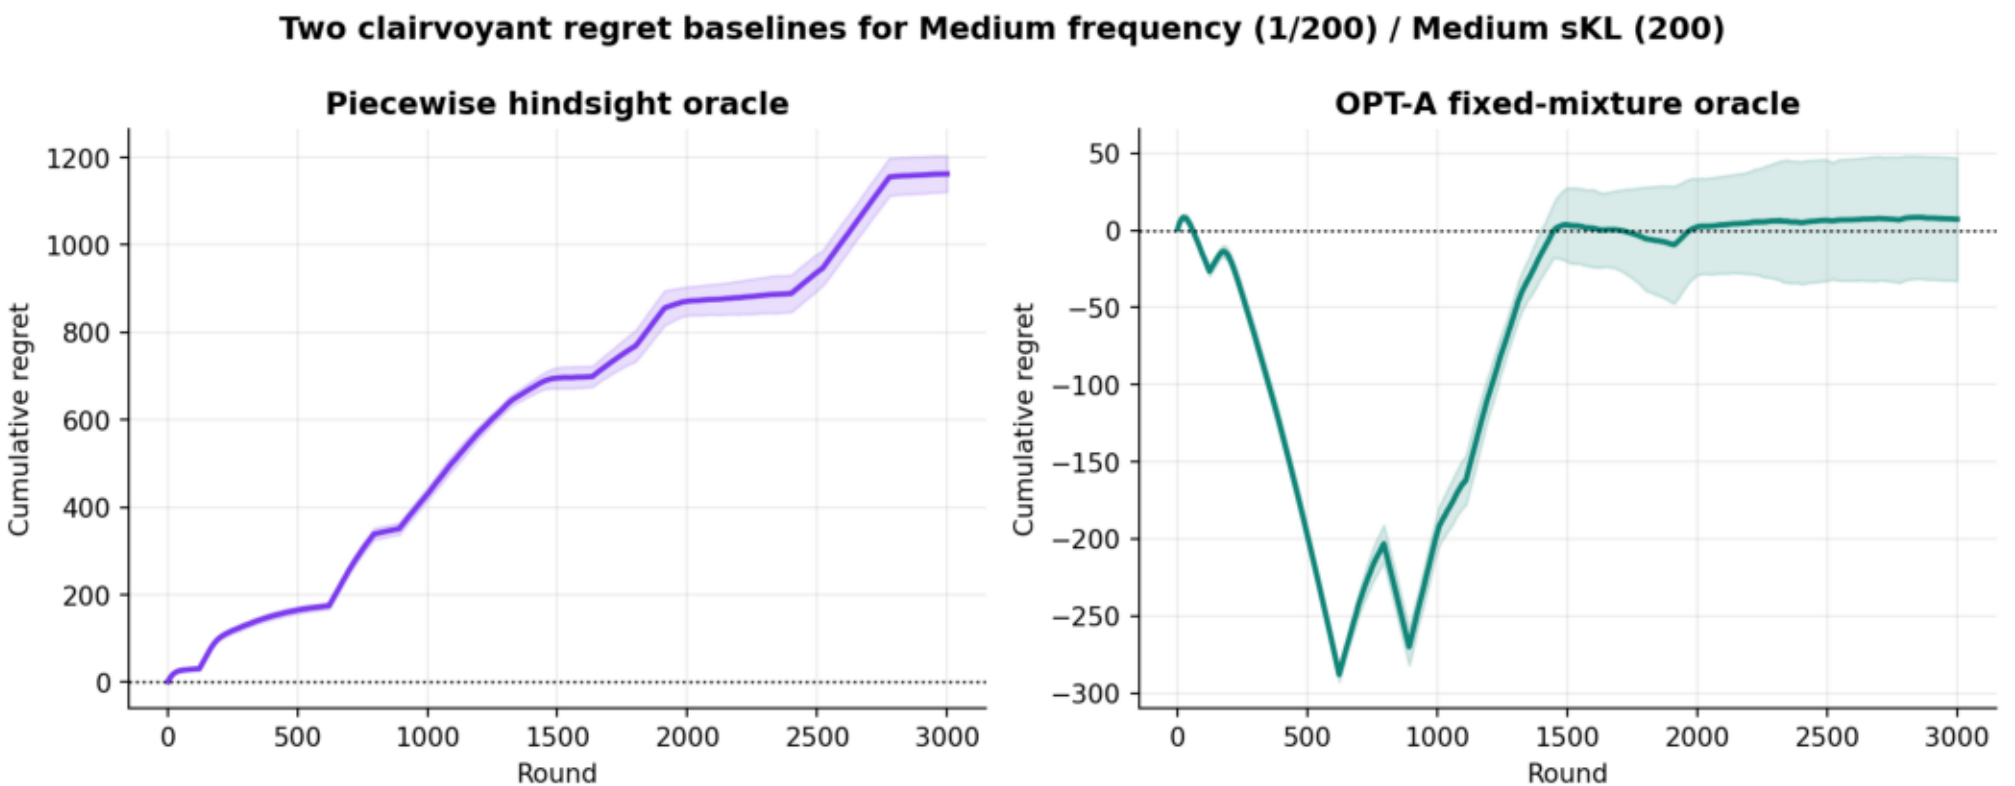

Constellation profiles by sKL

The realized Gaussian constellations for sKL 20, 200, and 500.

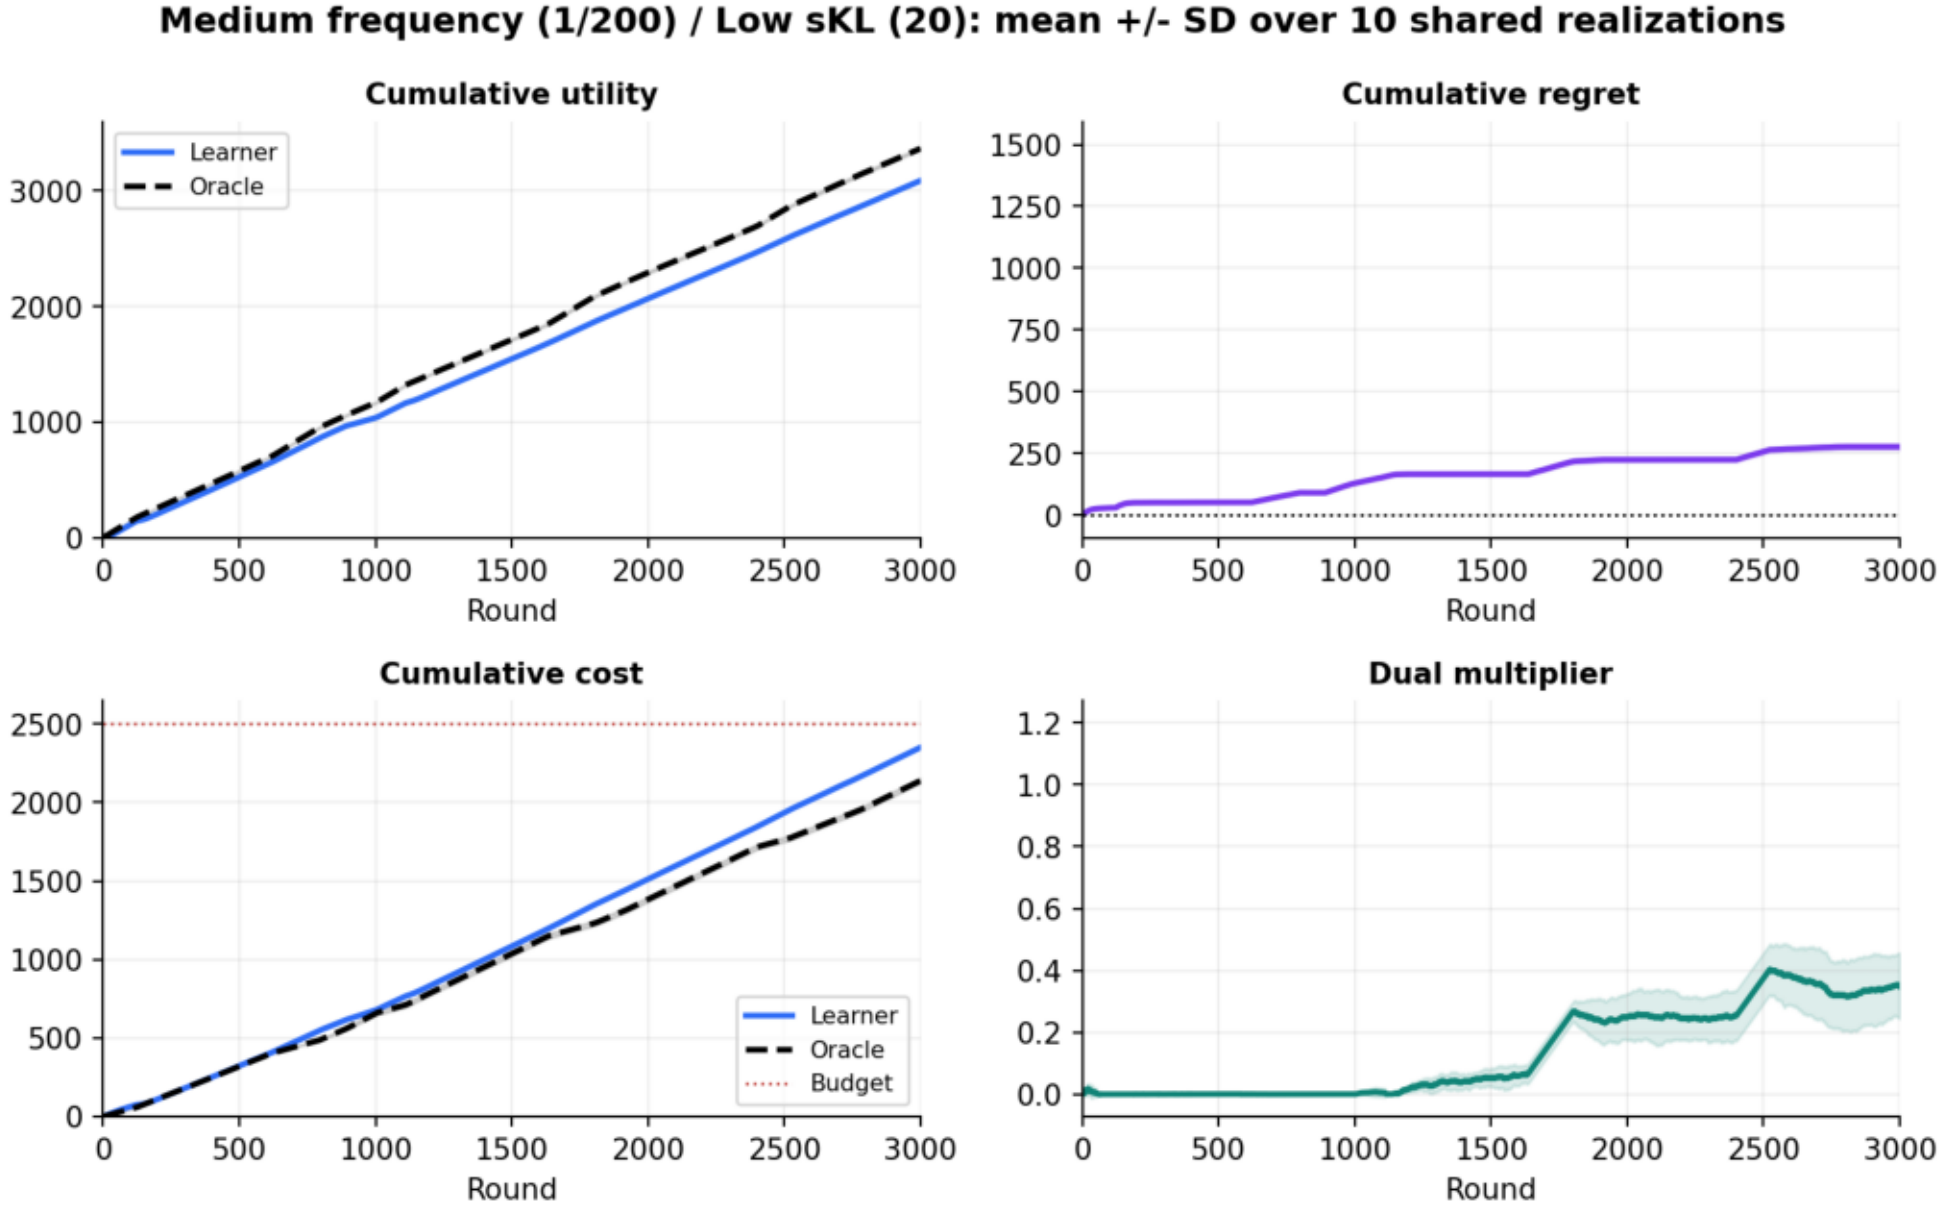

Two clairvoyant regret baselines

Piecewise hindsight regret remains the main baseline; OPT-A is the fixed-mixture LP benchmark.

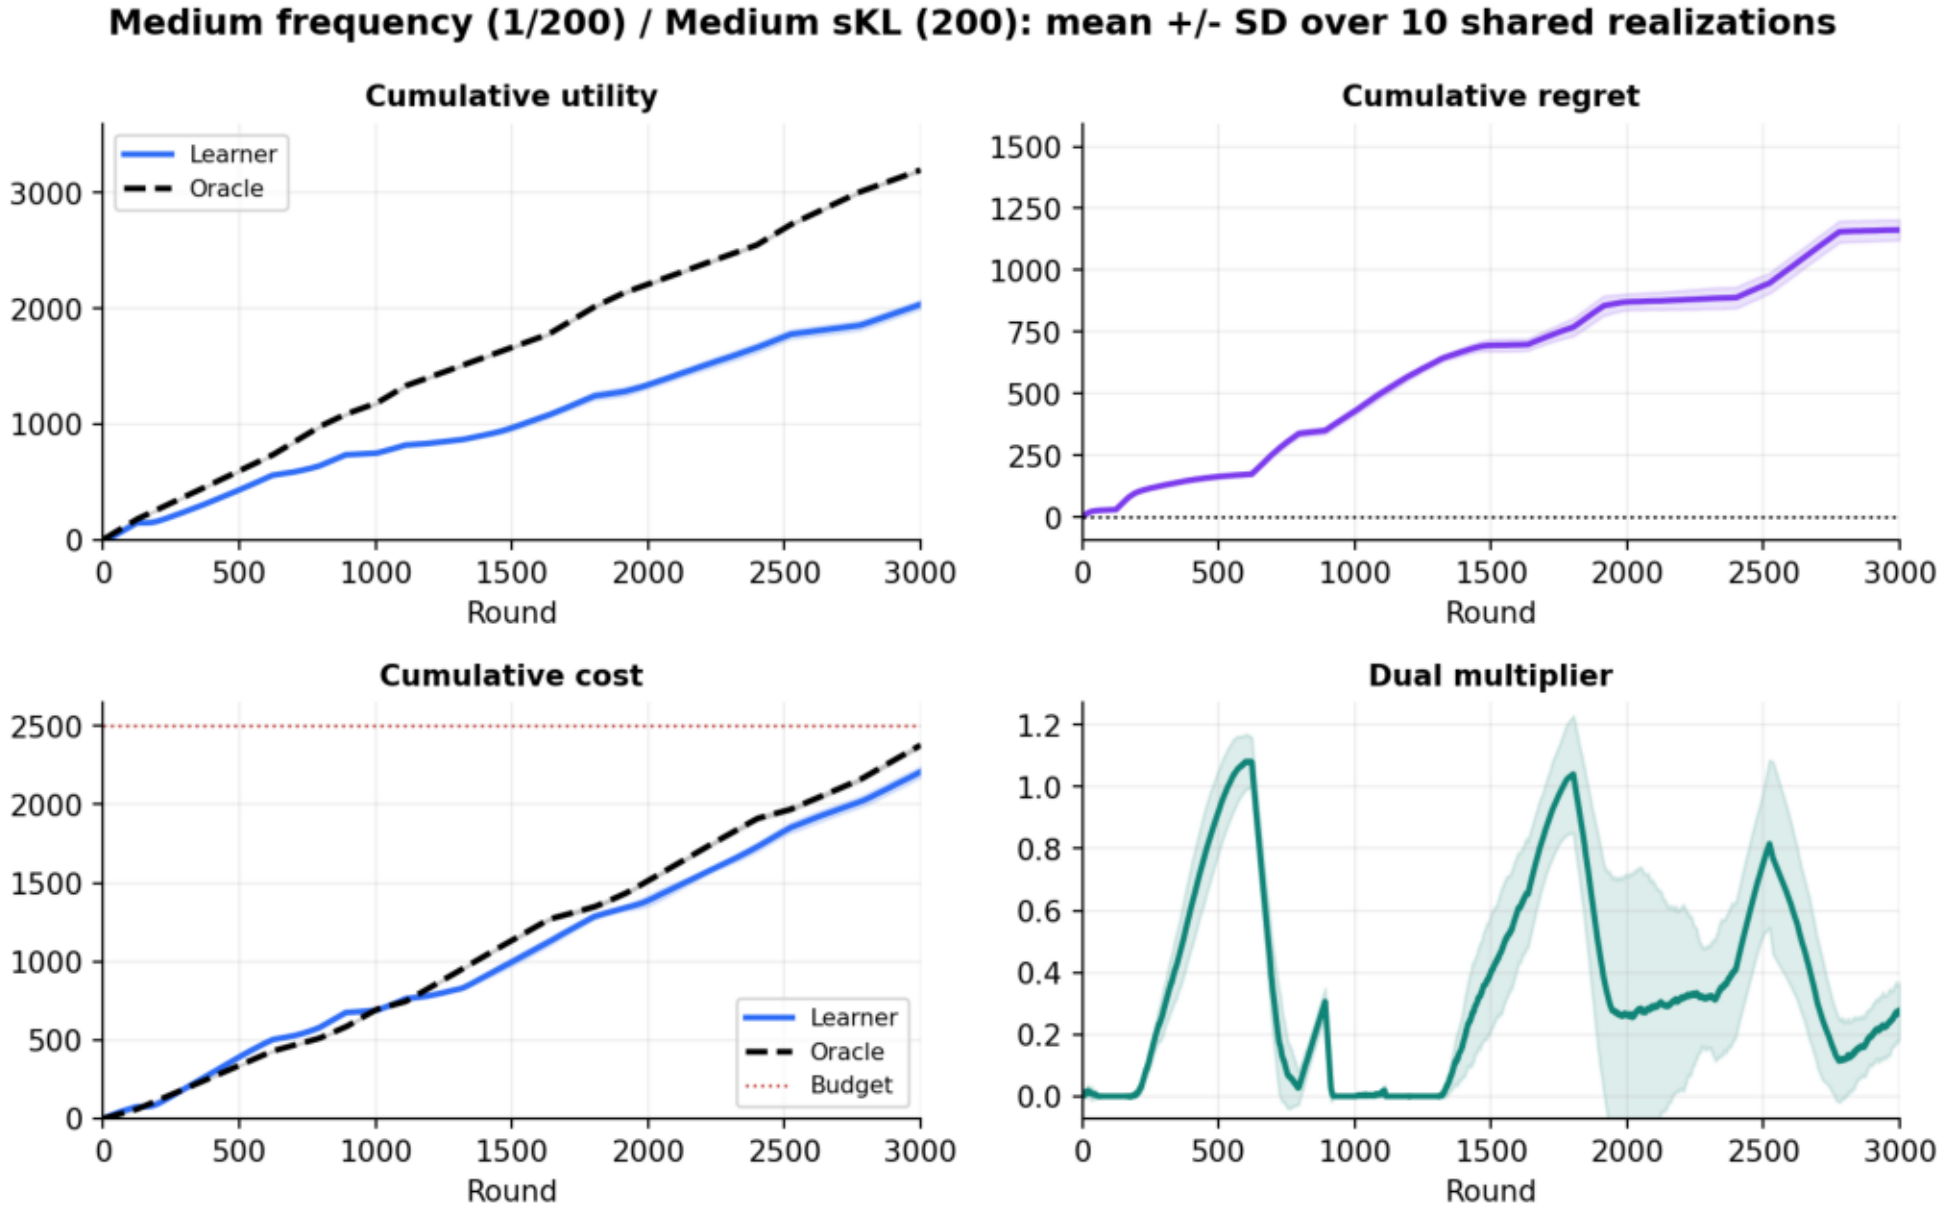

Low sKL diagnostics

Medium frequency, low sKL.

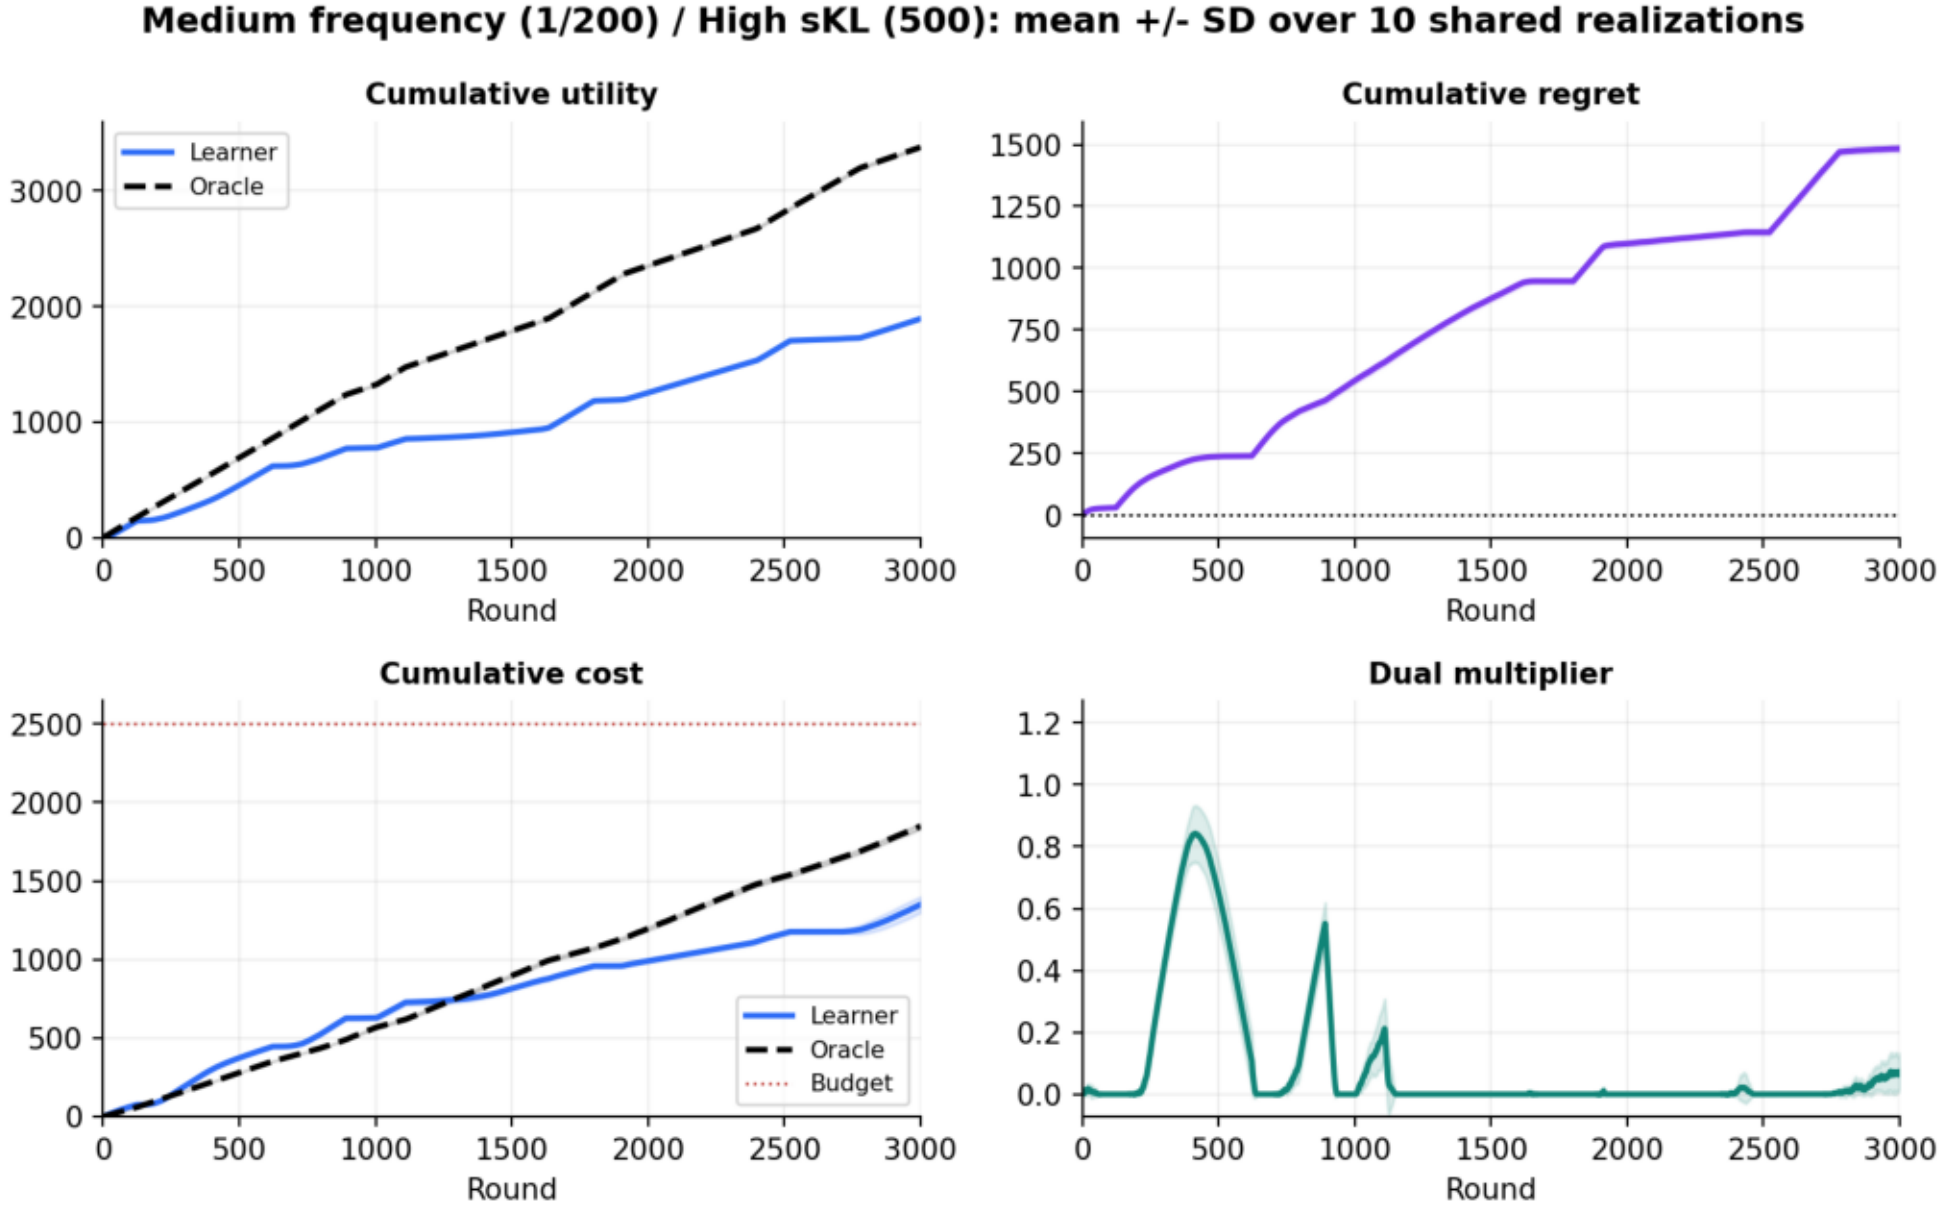

Medium sKL diagnostics

Medium frequency, medium sKL.

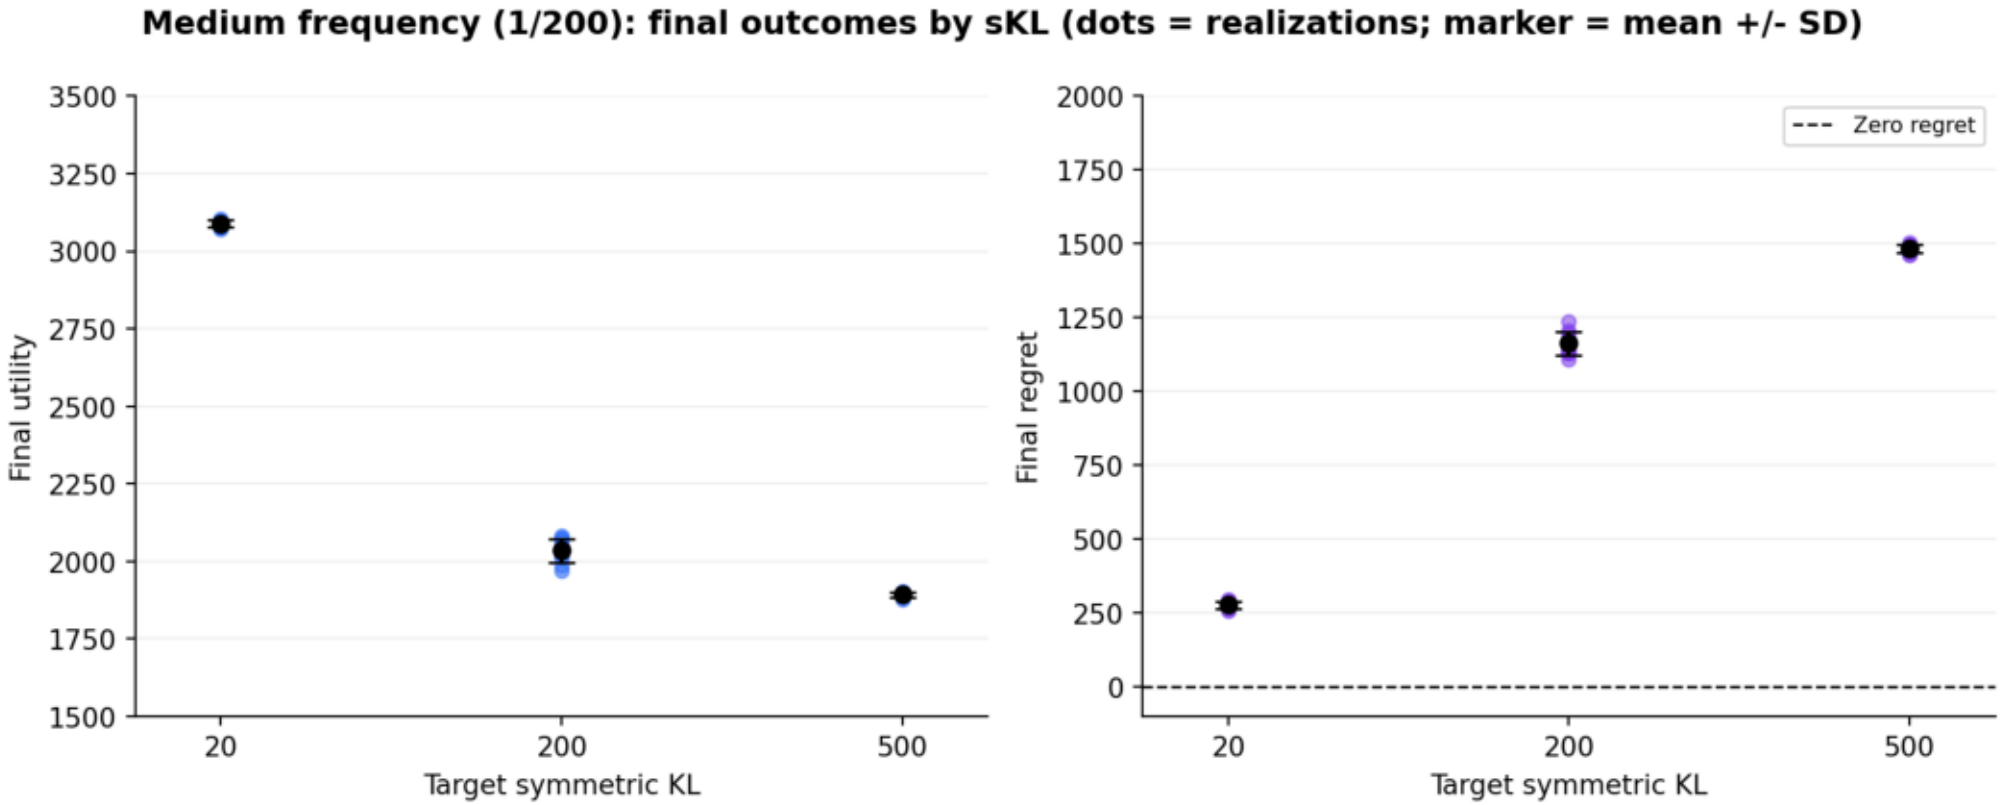

High sKL diagnostics

Medium frequency, high sKL.

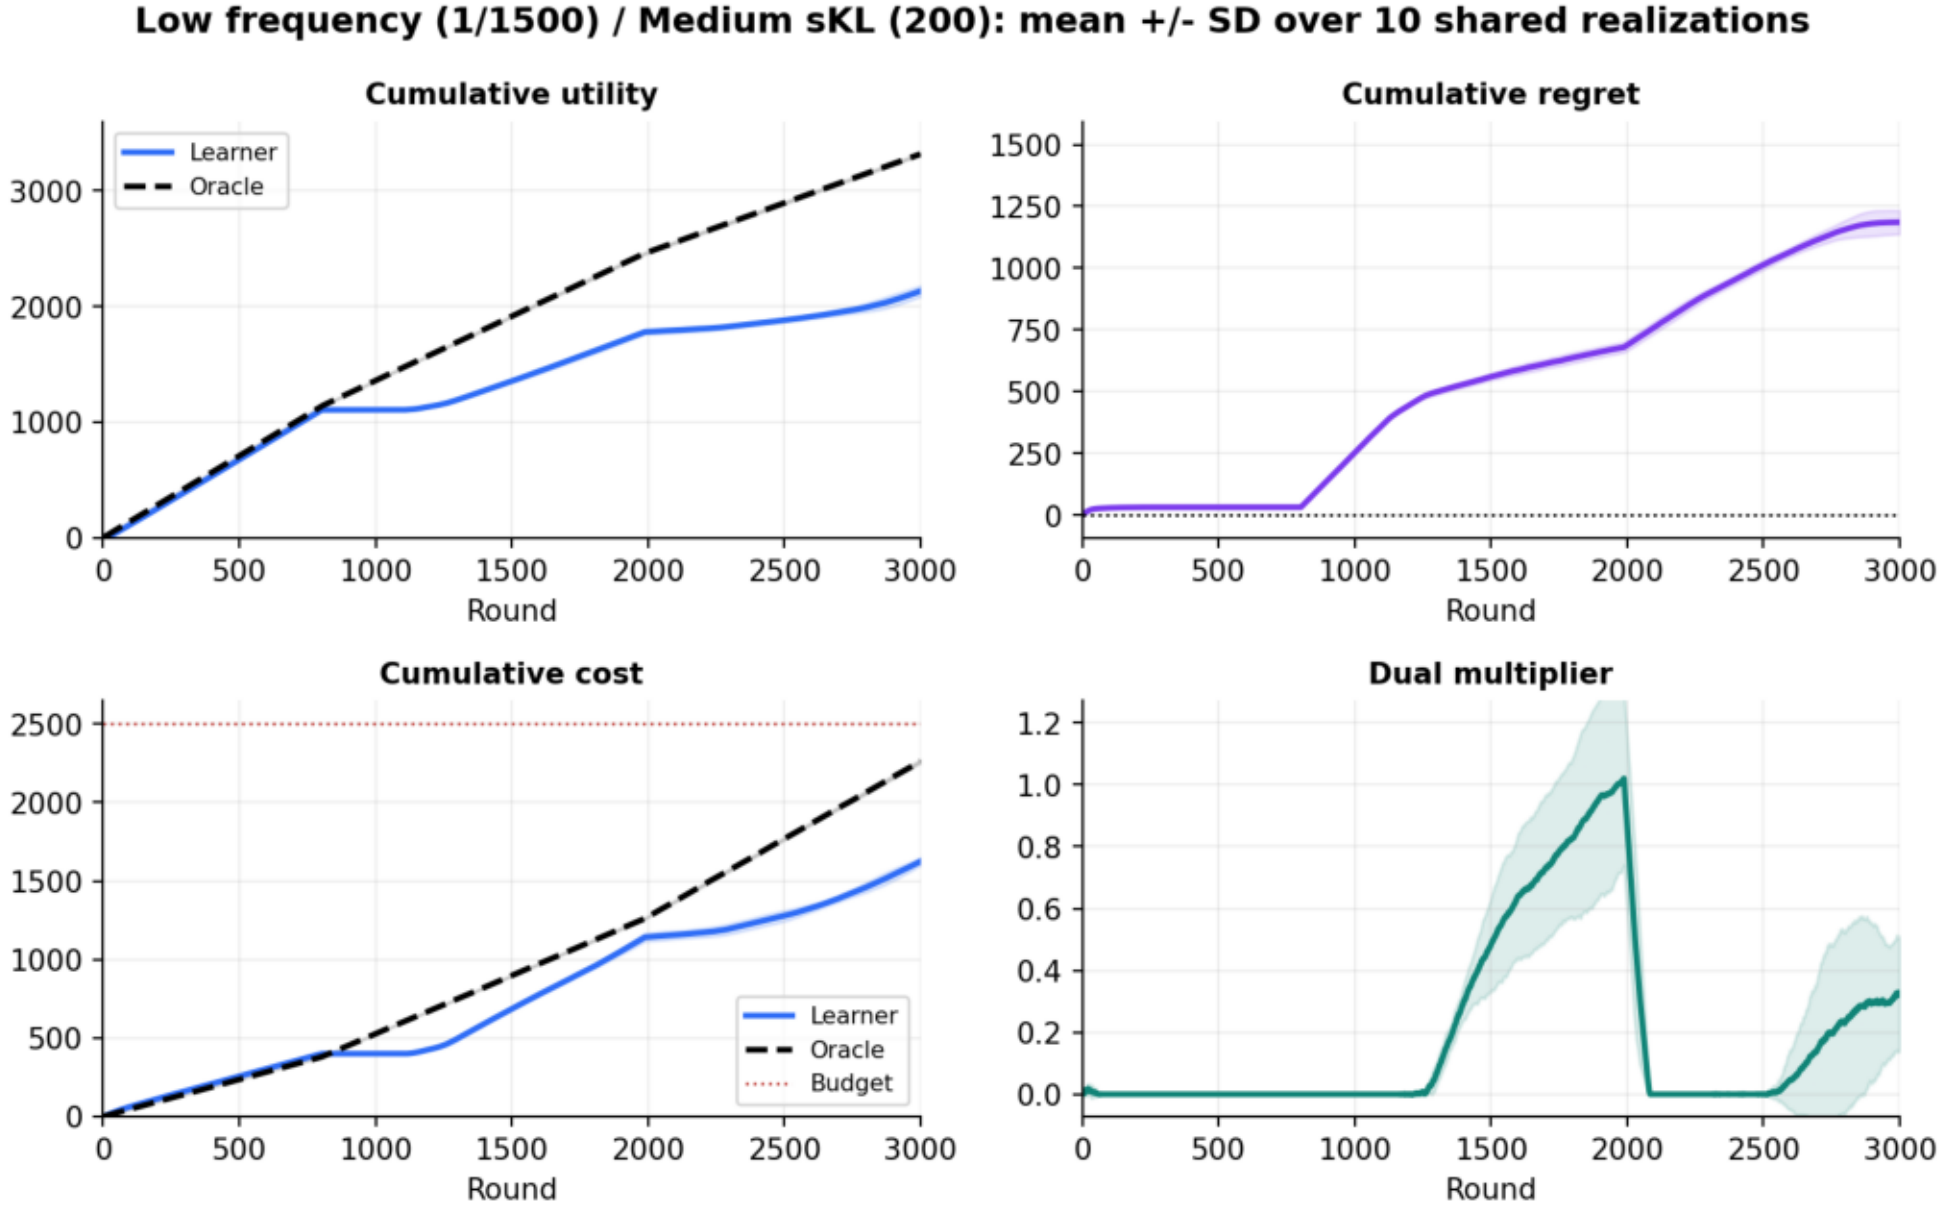

sKL summary at medium frequency

Comparison across sKL at fixed medium frequency.

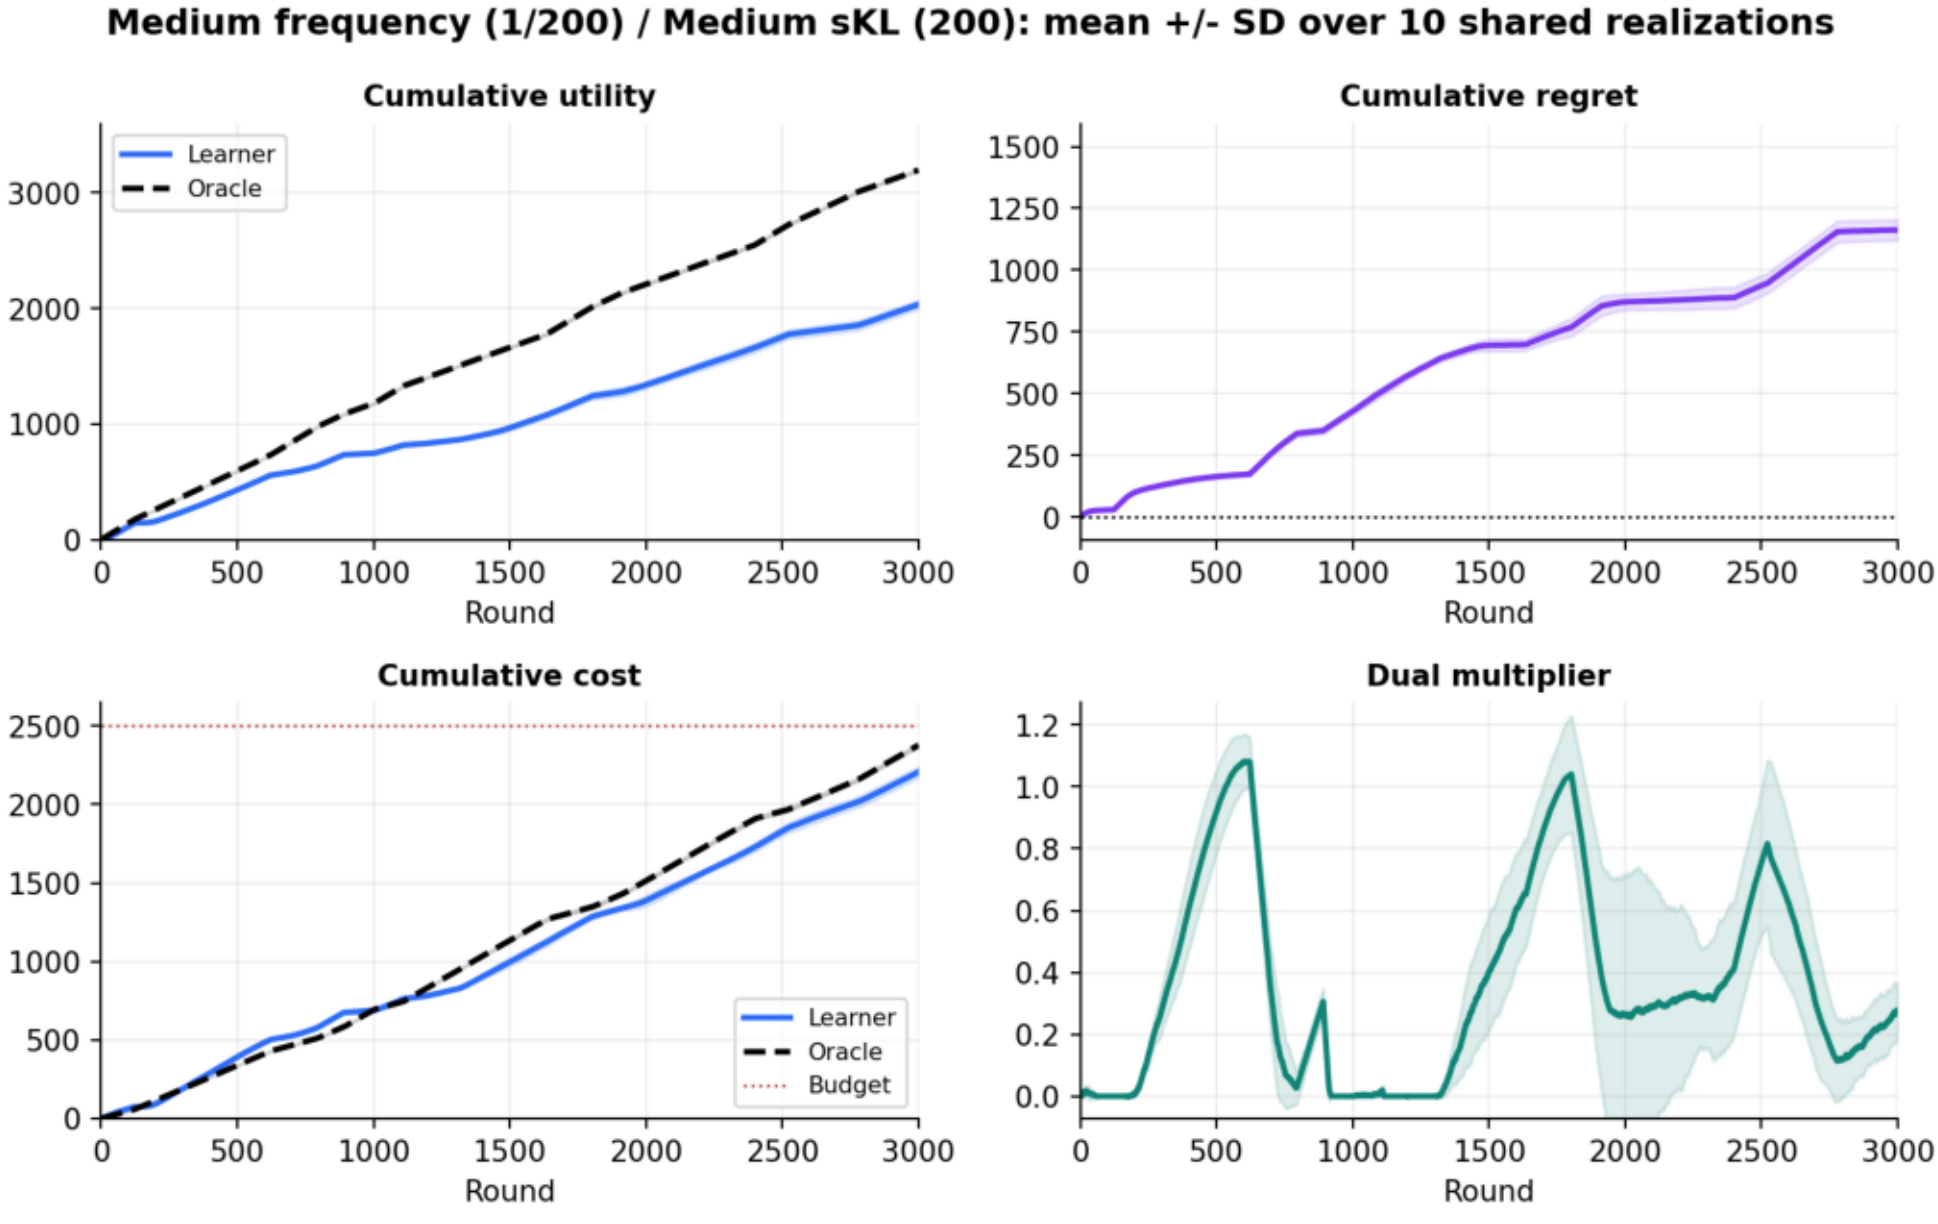

Low frequency diagnostics

Medium sKL, low frequency.

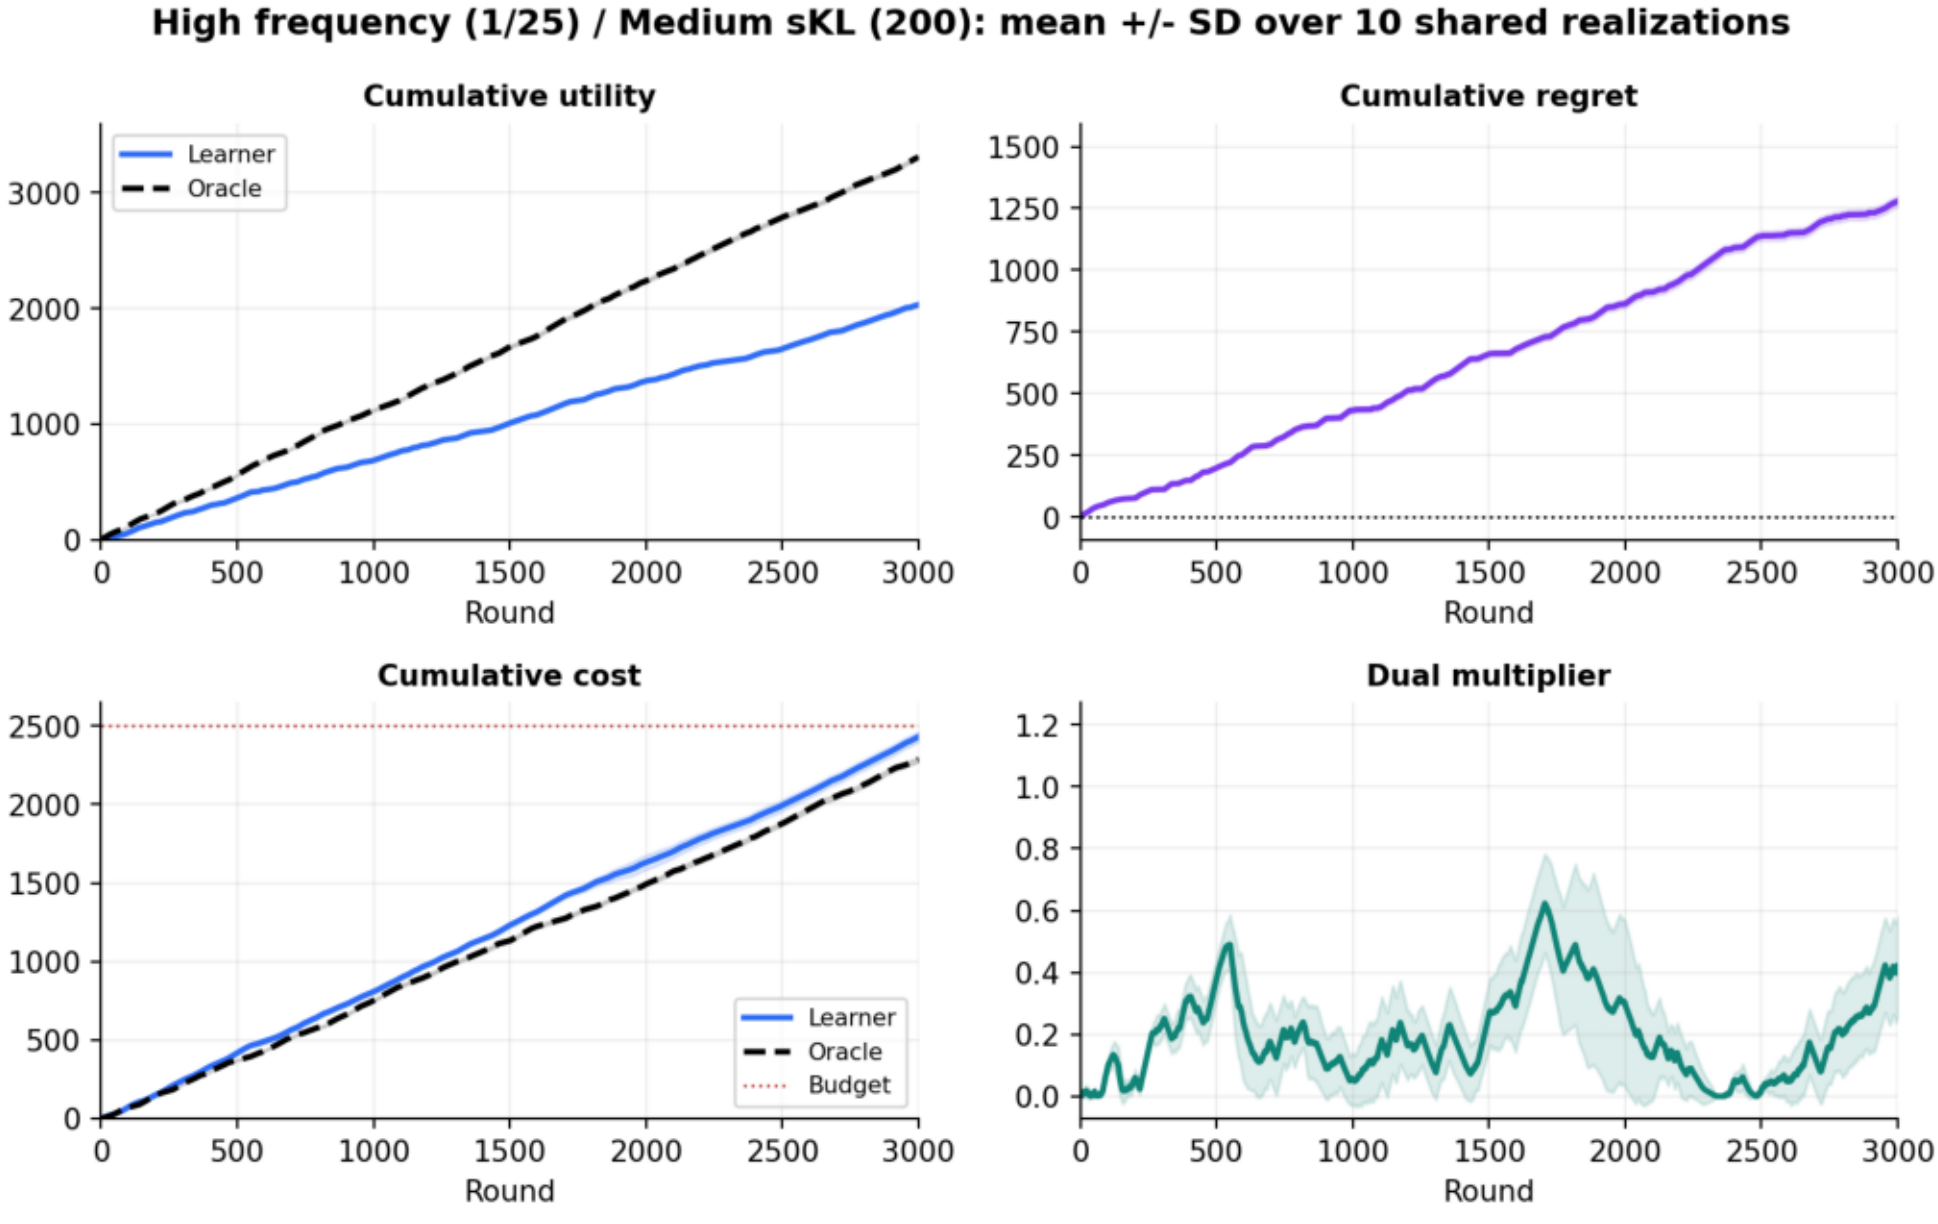

Medium frequency diagnostics

Medium sKL, medium frequency.

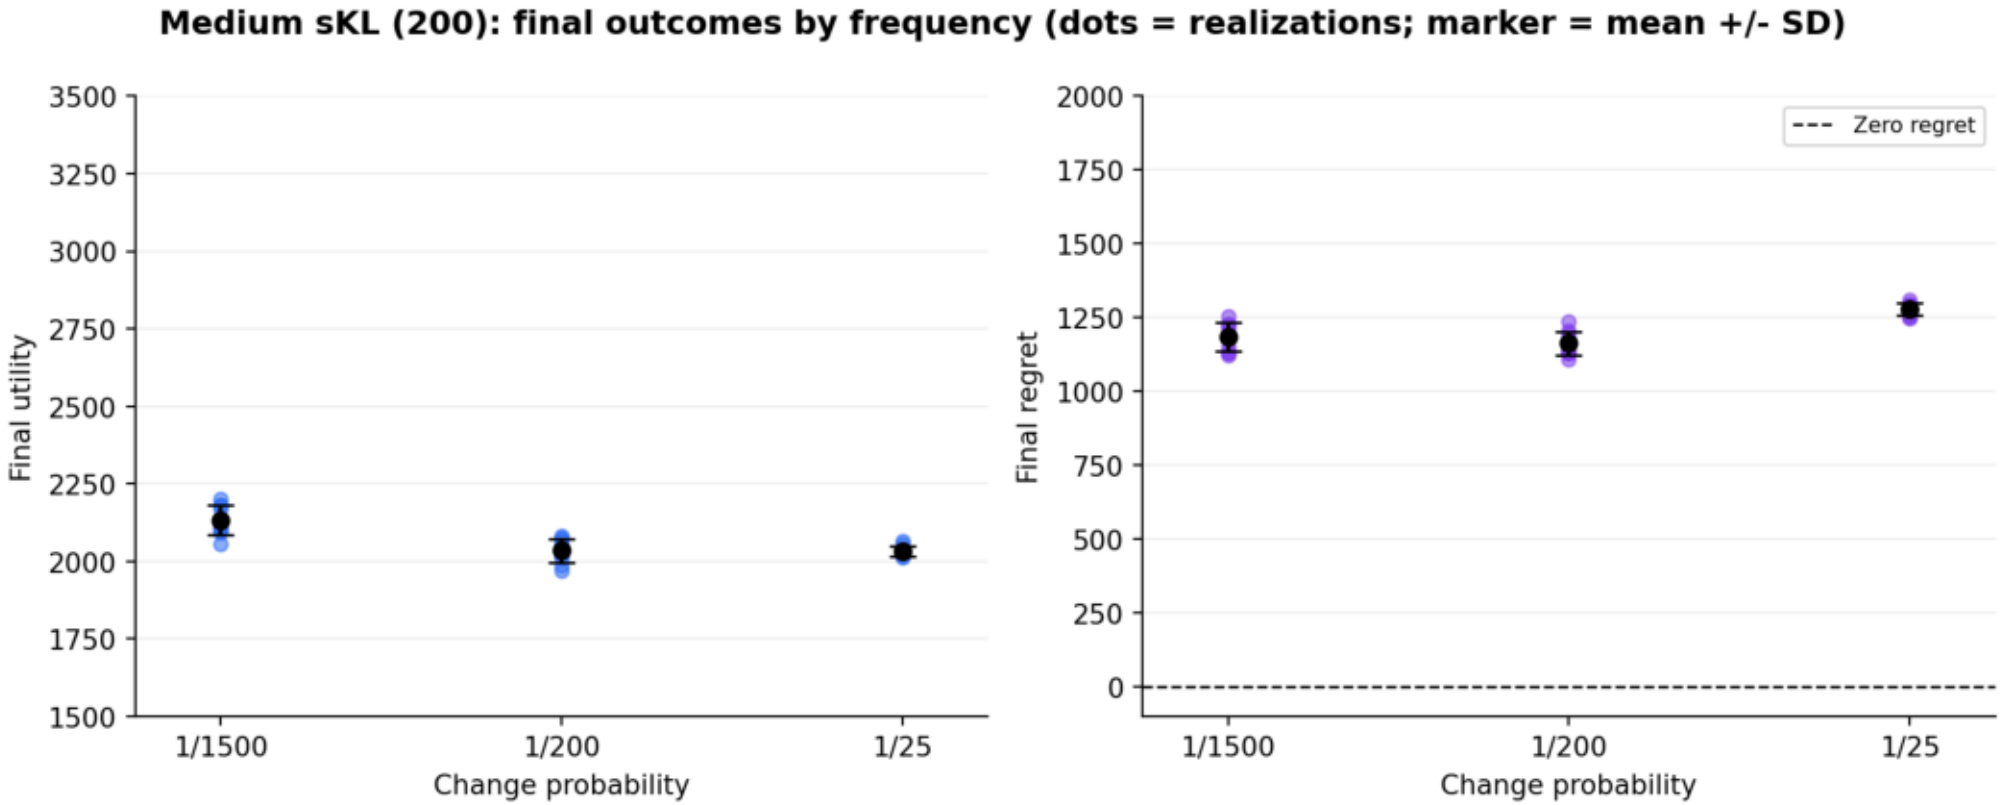

High frequency diagnostics

Medium sKL, high frequency.

Frequency summary at medium sKL

Comparison across change frequencies at fixed medium sKL.

All learning curves

Mean cumulative utility curves for all current settings.
